

ORAL-FACIAL EXAMS: WHAT YOU MIGHT BE MISSING

1.0 HOURS

COURSE ABSTRACT

A thorough oral-facial exam can help SLPs identify and/or rule out underlying structural, functional, and motoric impairments necessary for differential diagnosis of speech sound disorders. This presentation will specifically address what oral/facial structures and motor tasks can help SLPs differentially diagnose speech sound disorders and what findings may lead them to consider appropriate referrals to specialists. Videos of actual assessments will be shown to demonstrate particular aspects of an oral mechanism exam administration.

LEARNING OBJECTIVES

- Explain how oral mech exams contribute to the differential diagnosis of speech sound disorders
- Describe what key aspects of an oral mechanism exam should be included in an a thorough speech assessment
- List red flags that may be revealed in an oral mech exam to help in the differential diagnosis of specific speech sound disorders

AMY GRAHAM, MA, CCC-SLP

Amy is a speech language pathologist and owner of Graham Speech Therapy, a private practice in Colorado Springs that specializes in pediatric speech sound disorders. She received both her bachelors and masters degrees in Communicative Disorders from California State University, Fullerton and has been an SLP for over 20 years. Amy is the creator of the Graham Speech Therapy Oral-Facial Exam and the Bjorem Speech Sound Cues Decks for Lateralization and Phonology Targets for Cycles, has been a guest on numerous SLP podcasts, and is listed on the Apraxia Kids Directory of SLPs with expertise in Apraxia. She has a particular interest in supporting and equipping SLPs to help them provide evidence-based treatment by posting frequent therapy videos and practical therapy tips on social media.
